

HARSHAL PATEL

Senior .NET Engineer | Full-Stack & Cloud Architecture

Toronto, Canada | +1 (249) 876-1147 | harshal1902.ca@gmail.com | linkedin.com/in/harshal-patel

PROFESSIONAL SUMMARY

Senior .NET Engineer with 15+ years of hands-on full-stack software development, delivering enterprise integrations, event-driven microservices, and performance-critical systems at scale. Currently leads a backend team of 9 and drove the multi-tenancy architecture taking an in-house logistics platform to market as enterprise SaaS. Deep back-end expertise in C# (.NET 8) and SQL Server, including schema design, normalization, and query optimization that cut a critical response time from 150 seconds to 2.25 seconds. Paired with 4+ years of front-end development in Angular, React, vanilla JavaScript, jQuery, HTML, and CSS. Works directly with stakeholders and solution architects to gather requirements, present solutions, and finalize technical decisions. Actively uses AI development tooling (Claude Code, AugmentCode) to improve delivery speed and code quality. Domain experience spans enterprise SaaS, logistics, ERP, and gaming.

TECHNICAL SKILLS

Back End: C#, .NET 8, .NET Core, .NET Web API, ASP.NET MVC, Blazor, Microservices, Rust, Python, PowerShell

Performance & Diagnostics: Memory leak diagnosis, .NET memory management and disposal patterns, allocation optimization, SQL query tuning

Front End: JavaScript (vanilla), jQuery, Angular (4+ years), React, HTML5, CSS3, TypeScript

Databases: SQL Server (schema design, normalization, query optimization, indexing, stored procedures), Azure SQL, PostgreSQL (AlloyDB), Cosmos DB, MongoDB, Kusto (KQL)

Architecture: Multi-Tenant SaaS Architecture, Event-Driven Architecture, Event Sourcing, Microservices, Enterprise Integrations, Object-Oriented Design, CI/CD

Messaging & Streaming: Kafka, RabbitMQ, RisingWave, Azure Service Bus, Event Hub, Azure Queue Storage, Server-Sent Events (SSE)

Containers & Orchestration: Docker, Kubernetes

Cloud Platforms: Microsoft Azure, Google Cloud Platform (GCP), Google Firestore

Azure Services: Data Factory, Synapse, Databricks, Data Lake Storage, Logic Apps, Functions, Service Fabric, Key Vault, API Management, App Service, SQL Managed Instance

APIs & Data Formats: REST APIs, OAuth 2.0, SSO, JWT, Swagger, CSV, XML, JSON, Parquet, Structured Streaming, Delta Lake

Caching: Redis, Valkey, In-Memory Caching

DevOps & Observability: Azure DevOps (CI/CD), GitHub, Git, Jenkins, Jira, Mantis, Elastic/Kibana (log analysis)

AI Development Tools: Claude Code, AugmentCode

Methodologies: Agile, Scrum, Kanban, Iterative SDLC

PROFESSIONAL EXPERIENCE

Senior Software Developer — Charger Logistics Inc. (via Pearl Technologies Ltd.), Toronto, ON

06/2024 – Present

- Drove the multi-tenancy architecture for taking an in-house logistics platform to market as enterprise SaaS, selecting a schema-per-tenant model and designing a central tenant registry that manages per-tenant feature versioning; presented and finalized the approach in collaboration with the company's solution architect
- Lead a backend team that scaled from 2 to 9 developers, personally owning complex and high-risk development while the team delivers core feature work; run regular knowledge-sharing sessions to raise technical depth across the group
- Built a Rust connector integrating with RisingWave to support high-throughput streaming workloads at enterprise scale
- Lead design of a microservices architecture on .NET 8 and Kubernetes, using Kafka and RabbitMQ for event-driven, inter-service communication
- Apply event sourcing to build new enterprise integrations for performance-critical systems, ensuring auditable state changes and reliable replay across services
- Migrated caching infrastructure from Azure Redis Cache to Google Valkey

- Diagnosed and permanently resolved a production memory leak causing recurring pod restarts in a .NET microservice, tracing it to undisposed IronPDF document objects and MemoryStreams holding unmanaged resources; enforced deterministic disposal via using scopes and reduced allocation pressure by refactoring string concatenation to StringBuilder
- Drove a full data migration from MongoDB and SQL Server to PostgreSQL (AlloyDB), then diagnosed the resulting performance bottleneck as a table design problem rather than a query-tuning one; restructured and normalized the schema and built an appropriate indexing strategy in partnership with DBAs, cutting response time from 150 seconds to 2.25 seconds
- Built a live chat module and real-time dashboards in React on Google Firestore; replaced SignalR with Server-Sent Events (SSE), simplifying the real-time communication layer
- Lead requirement-gathering sessions with directors and business owners, translating technical concepts for non-technical stakeholders and presenting proposed solutions
- Oversee offshore development resources and author functional/technical documentation with architecture diagrams

Senior Software Developer — Engage2excel, Canada (Remote)

06/2023 – 03/2024

- Led migration of a legacy F# codebase to .NET 6, modernizing the platform and bringing it onto the supported framework
- Developed Azure-based backend services using Azure Functions, Azure Storage, and C# on .NET 6, including unit testing and integration work

.NET Developer (Azure) — Alept Consulting (Affirma Consulting), India

08/2019 – 05/2023

- Delivered custom software solutions for enterprise clients in a consulting model, architecting solutions for new requirements in direct collaboration with clients and stakeholders
- Built full-stack applications pairing .NET Core APIs in C# with Angular front-ends, developing UI components, workflow screens, and client-side logic in JavaScript and jQuery
- Designed and architected large-scale data solutions using Azure Data Factory, Azure Databricks (Python), Kusto (KQL), and Hive Clusters, including SQL development, stored procedures, and query performance tuning
- Drove sprint planning and review as a key Agile team member, prioritized developer task allocation with the project manager, stood in for the onshore lead on customer success reviews, and performed peer code reviews to maintain code quality across the team

Key Projects:

- Rare Sea of Thieves: Data engineering using Azure Data Factory, Synapse, Databricks, Hive Clusters, SQL Server, KQL, data warehousing, Azure Data Lake Storage, and Power BI
- Xbox Ambassadors: .NET Core API (C#) with Angular front-end, Azure Service Fabric, Cosmos DB, and SQL Server
- Xbox MVP: .NET Core API (C#) with Angular front-end and Azure services

Senior Software Engineer — Techblocks, India

01/2018 – 08/2019

- Designed, coded, and configured application features in C#, SQL Server, and JavaScript across the full stack
- Delivered client demos, proposed technical solutions for new feature requests, and authored functional and technical documentation

Senior Software Engineer — Cygnet Infotech, India

08/2013 – 01/2018

- Developed and unit-tested application functionality in C# and JavaScript, collaborated with designers and project managers on solution design and requirements gathering, and supported client calls on intricate business logic

Junior Software Engineer — ManekTech, India

05/2012 – 08/2013

- Built responsive HTML, CSS, and JavaScript pages from wireframes and performed unit and cross-testing

EDUCATION

Bachelor of Engineering, Computer Engineering (BE-CE) — Hemchandracharya North Gujarat University, India
